Complete system incl. scanner, probe, headset, audio bundle and AAA software

Designed for research into articulatory dynamics of typical and disordered speech. It is compact and silent with precise automatic audio synchronisation and high frame rates. Suitable for field work as it can be powered from a laptop battery but equally suited to laboratory work. Long record times and automatic edge detection.

Key Features:

- **Portable**: Scanner 106x105x21mm; 0.26kg
- **Hardware sync signal**: TTL pulse on completion of every frame allowing fully automated, accurate audio sync.
- **Speech capture software**: AAA s/w provides extensive tools for image analysis
- **Raw scan data capture**: Records raw ultrasound scanline data rather than interpolated image data which saves disk space and allows more accurate analysis
- **High frame rate**: Frame rate up to 140 Hz (more typically 119Hz for 70mm depth; 120° FOV for 10mm probe and 81Hz for 90mm depth; 92° FOV for 20mm probe)
- **Low Cost**
- **Quiet**: No fan noise, unlike many other systems
- **Microconvex probe**: Short 10mm radius probe with large field of view (FOV) suitable for children and small adults.
- **Optional low frequency probe**: For better penetration in large adult speakers
- **Speech Therapy Visual feedback Tools**: Graphical overlay on live image to highlight palate position and target constrictions
- **Long capture times for conversational analysis**

Computer recommended specification:

- Windows® based Desktop/Notebook/Tablet PC
- Screen resolution 1024x768 or more
- CPU i3/i5/i7 1.8 GHz or faster
- 4 Gb of RAM or more
- Two or more USB 3.0 interface
- Windows® XP SP3, Windows® Vista SP2, Windows® 7, 8, 10 (all versions 32/64-bit)
Software and accessories

Recommended system:

A Micro system
C Convex 2-4MHz, 20mm radius probe
D AAA software for synchronous recording and analysis of ultrasound and video
E Pulse Stretch unit [for conditioning the EchoB sync pulse for audio capture]
F Probe stabilization headset
G Audio Bundle

Optional microconvex 5-8MHz 10mm radius probe

Optional associated lip camera
i Headset camera bracket and NTSC microcamera
ii Video capture card (USB2)
iii Video/audio synchronisation unit
