

UltraFit

Articulate
Instruments **A** **I**

Design

UltraFit is a lightweight headset designed to hold an ultrasound probe under the chin for the purpose of stable imaging of the tongue. Designed to be strong, rigid and fully adjustable to fit a large range of head sizes, UltraFit is ideally suited for speech production research.

Key Features:

- **Lightweight** (300g)
- **Adjustable probe position**
- **Comfortable**
- **Stable**
- **Fits adults and children**
- **Replaceable washable pads**
- **All plastic version for EMA compatibility**
- **Compact for transporting**

Designed by Anna Matasova and Lorenzo Spreafico

Above and left

Adult and 8-year-old wearing same headset. Shorter arm which comes as an accessory can be used for younger wearers.
